

UTM

UNIVERSITI TEKNOLOGI MALAYSIA

FACULTY OF COMPUTING

SEMESTER 1

2024/2025

SECR1213-02 NETWORK COMMUNICATIONS

LECTURER: DR. ISMAIL FAUZI BIN ISNIN

GROUP NAME: Y-LINK

INDIVIDUAL REPORT

NAME : SAFIYA NURSYAHADAH BINTI MASNOOR

MATRIC NUMBER : A23CS0176

My Contribution :

- Prepare google docs link and initiate when to do the task and discuss the task.
- Task 1 : Design the ground floor plan.
- Task 2 : Researching about the security considerations of the network plan.
- Task 3 : Make a research of which server and router is the best.
- Task 4 : Me and Dayang responsible for the connections in the ground floor work area.
- Task 5 : Me and Dayang count the number of subnets needed for the ground floor, and discuss how to divide the network and assign IP addresses.
- Task 6 : 1. Do the reflection for task 1 and task 2. Also, do the background for a group report.

Team Members	Contribution
Dayang Farah Farzana binti Abang Idham	- Task 1 : Responsible for designing General purpose lab - Task 2 : Responsible for researching the technical feasibility of the network plan. Also, she emailed the interviewees about the purpose of the interview and asked the availability of the interviewees to book a slot for the interview. - Task 3 : Research of which antivirus and ethernet cable is the best - Task 4 : Dayang and Safiya responsible for the connections in the ground floor work area. - Task 5 : Dayang and Safiya count the number of subnets needed for the ground floor, and discuss how to divide the network and assign IP addresses. - Task 6 : Do the reflection for task 5 and introduction for the group report.
Farra Nurzahin binti Zaharil Anuar	- Task 1 : Farra is responsible for designing Cisco lab - Task 2 : Farra is responsible for researching the economical feasibility of the network plan and the introduction. Also, she emailed the interviewees about the purpose of the interview and asked the availability of the interviewees to book a slot for the interview. - Task 3 : Research of which modem and firewall is the best - Task 4 : Farra and Harini responsible for the connections in the first floor work area. - Task 5 : Farra and Harini count the number of subnets needed for the ground floor, and discuss how to divide the network and assign IP addresses. - Task 6 : Do the reflection for task 4 and conclusion for the group report.
Harini A/P Sangaran	- Task 1 : Responsible for designing Embedded lab - Task 2 : Harini is responsible for researching the operational feasibility of the network plan. - Task 3 : Research of which cable, switch and wireless access point is the best. Also, Harini took over ethernet cable and combined it with cable. - Task 4 : Harini and Farra responsible for the connections in the first floor

	work area. - Task 5 : Harini and Farra count the number of subnets needed for the ground floor, and discuss how to divide the network and assign IP addresses. - Task 6 : Do the reflection for task 3 and abstract for the group report.
--	---

How I work as a group :

- Actively participate by sharing my own ideas and suggestions.
- Respond to and provide feedback on ideas shared in group chat.
- Research and share additional references that may benefit the group.
- Complete my assigned tasks on time.
- Ask questions when I am unsure to avoid any problems.

What had I learned from working as a group :

- Providing feedback and staying engaged is key to effective teamwork.
- Dividing tasks fairly ensures everyone contributes equally.
- Help team members when they face difficulties to keep the group on track.
- Virtual meetings save more time and help clarify points more efficiently than chat in the group.

What had I learned from this project :

- I discovered tools and software for floor plan design and realized I have some skill in this area.
- Researching and asking questions are crucial to understanding and solving problems. For example, we asked an expert in this field, Mr Mohamad Nazri to help us with task 2.
- Task 4 provided valuable insights into designing and implementing physical network connections to ensure efficient and reliable communication within the building.
- Task 3 taught me about the functionality of certain devices, improving my knowledge of networks.
- Task 5 helped me learn about subnetting and dividing network addresses. While challenging at first, group discussions made it much easier.

Comments and suggestions in this project :

- This project showed me the importance of teamwork and communication.
- The structure timeline and task division provided were very helpful.
- The project was a valuable learning experience, covering both technical and teamwork skills.
- No major suggestions for improvement, as the project was well-structured and highly beneficial.
